

Ahmed Alzahrani

Industrial Engineer | Automation & Digital Transformation | Equipment & Asset Management

Jeddah, Saudi Arabia · +966 56 773 9037 · enga7medzhrani@gmail.com

PROFESSIONAL SUMMARY

Industrial Engineer specializing in operational process analysis, process redesign, data solutions, and automation for equipment and asset management. Combines industrial engineering, Power BI, Oracle-export data processing, and Python to improve operational visibility, ownership clarity, data quality, and management decision support. Delivers bilingual Arabic/English executive outputs, supported by nearly eight years of earlier BIM coordination experience on major construction projects.

CORE SKILLS

Process & Industrial Engineering: AS-IS / TO-BE analysis, process mapping, value stream mapping, Target Operating Model design, RACI / SOP, weighted decision matrices, process improvement, data quality and governance.

Business Intelligence & Data Analytics: Power BI — semantic modeling, Power Query, and applied DAX development; Excel analysis; Oracle-export analysis; Hijri/Gregorian date handling; dashboard and executive reporting.

Automation & Digital Solutions: Python data cleaning and transformation, reusable validation scripts, SharePoint solution design.

PROFESSIONAL EXPERIENCE

Automation Engineer — Equipment & Asset Management

Jan 2026 – Present

Saudi Binladin Group (SBG) — Jeddah, Saudi Arabia

- Analyzed two years of equipment-request records (1,300+ requests covering 3,000+ requested units) using operational data, documentation, and field interviews; delivered AS-IS / TO-BE analysis, gap analysis, and a proposed Target Operating Model with a Sourcing Gate design and a phased implementation roadmap.
- Developed the division's equipment contracts monitoring dashboard in Power BI (140+ contract records), applying Power Query transformations, applied DAX measures, Hijri/Gregorian date handling, original-vs-addendum contract separation, and deduplication logic.
- Documented business rules and data-quality controls for contract reporting, reducing the risk of duplicate counting and frozen expiry logic and improving the consistency of refresh-based management reporting.

- Conducted a preliminary Rent vs. Own analysis for selected equipment categories, identifying potential cost-optimization opportunities subject to final financial and operational validation.
- Developed reusable Python scripts for cleaning, standardizing, and validating dozens of recurring monthly Oracle exports before their use in Power BI reporting, reducing repetitive manual preparation.
- Designed a SharePoint-first solution architecture (design level) for digitizing the equipment request process, and delivered bilingual Arabic/English executive reporting.

BIM Engineer

May 2018 – Dec 2025

Saudi Binladin Group (SBG) – Jeddah, Saudi Arabia

- Coordinated multidisciplinary BIM models for major construction works, including Haram Expansion facilities and pedestrian and utility tunnels (Shamayah Services Building).
- Converted structural drawings into centralized BIM models using Revit Structure and BIM 360.
- Supported structural and MEP coordination through Navisworks, managing clash-detection and issue-resolution cycles to support site-execution approvals.

Supervisor of Factory Operations

Feb 2017 – Mar 2018

Perfect Sign – Jeddah, Saudi Arabia

- Coordinated staff scheduling and operational reporting; monitored productivity, defects, and resource utilization; supported factory improvement activities.

EDUCATION

B.Sc. in Industrial Engineering — University of Business and Technology, Jeddah — 2017

PROFESSIONAL DEVELOPMENT & TRAINING

- Project Management Training — 36 hours — 2018
- Power BI Advanced Data Analysis — Professional Development / Self-Study — 2025
- Quality Control Green & Yellow Belt Training
- Revit Structure Course

LANGUAGES

Arabic — Native · English — Professional working proficiency
